Performance Metrics

GOOGLE LIGHTHOUSE — MEDIAN OF 3 RUNS PER STRATEGY

What these metrics measure — Google Lighthouse scores every page across five dimensions: *Performance* (raw speed), *Accessibility*, *Best Practices*, *SEO*, and *Progressive Web App*. The scores below focus on **Performance** and its Core Web Vitals — the specific signals Google uses as ranking factors and that directly determine whether visitors stay or leave.

Why it matters for conversion — Google research shows a 1-second increase in load time reduces conversions by up to **7%** and increases bounce rate by **32%**. Pages scoring below 50 typically lose a significant portion of visitors before they see any content. Core Web Vitals are also a confirmed Google Search ranking signal — poor scores harm organic traffic as well as on-site conversion.

LCP (how fast the main content appears) drives first impressions — above 4s most visitors assume the page is broken. **CLS** (layout shifts) causes mis-clicks on CTAs as buttons jump while the page loads. **TBT / INP** measure how responsive the page feels to clicks and form inputs — critical for sign-up and checkout flows. **TTFB** is the server’s response time and is the foundation every other metric builds on.

0) Business context

GreenHalo is an **emissions management / carbon accounting + sustainability reporting SaaS** (positioned as “Calculate Carbon Footprint” and “Sustainability Reporting Software”), likely targeting **mid-market to enterprise** (explicit savings claims for medium/large orgs). Primary conversion goal appears to be **demo/trial → sign up** (nav includes “Interactive Demo” and “Get Started” links to app signup).

1) Funnel map

Pages captured and purpose + primary CTA (Call to Action):

1) **Homepage** — <https://www.greenhalo.nz/>

Purpose: Explain product value + drive evaluation.

Primary CTAs (Calls to Action) observed: "Get Started" (links to app.greenhalo.nz/auth/signup), "Interactive Demo" (links to app.greenhalo.nz/auth/demo).

2) **Pricing page** — <https://www.greenhalo.nz/pricing>

Purpose: Plan selection + push to signup.

Primary CTA observed: "Get Started" (links to app.greenhalo.nz/auth/signup?subscriptionTier=2 and [...Tier=3](https://app.greenhalo.nz/auth/signup?subscriptionTier=3)).

3) **(Text context only) About** — <https://www.greenhalo.nz/about>

Purpose: Brand story.

Primary CTAs observed: "Interactive Demo" (links to app demo).

Above-the-fold not observed in provided content.

4) **(Text context only) Resource Hub** — <https://www.greenhalo.nz/resourcehub>

Purpose: Content marketing / education.

Primary CTA observed: "Interactive Demo" (links to app demo).

Above-the-fold not observed in provided content.

2) Executive summary

- **Biggest conversion blocker:** The primary conversion paths are split between **“Interactive Demo”** and **“Get Started”** without clear guidance on which is best for which buyer (and there’s also a “30 Day Free Trial” email CTA). This creates decision friction at the moment of action.
Evidence: Homepage header shows “Interactive Demo” + “Login” and hero CTAs show “Get Started” + “Interactive Demo”; homepage text context includes `mailto:...subject=30 Day Free Trial with GreenHalo`.
- **Biggest trust/credibility gap: No customer logos, reviews, or case studies detected** in text context; only an awards-style image appears. For a data-heavy ESG/carbon platform, missing trust proof (security/compliance/integrations) will likely suppress demo/trial starts.
Evidence: SOCIAL PROOF: “None detected” on homepage/pricing/about/resourcehub; TRUST SIGNALS include an image alt: “nz project management conference & awards1.png”.
- **Biggest messaging/positioning gap:** Above the fold, value prop is directionally clear (“Take the guesswork out of calculating your carbon footprint”), but **differentiation vs other carbon accounting tools is not explicit** in the first impression (e.g., what’s uniquely automated, what standards, what exports besides Toitū).
Evidence: Homepage hero headline: “Take the guesswork out of calculating your carbon footprint.” Subhead references “automatic draw...”, but no concrete differentiator statement is visible above the fold beyond that.
- **Biggest friction point: Mobile performance is at the “Poor” threshold for LCP (Largest Contentful Paint)** (4.07s), which is a concrete conversion risk (slower first meaningful view → higher bounce, fewer CTA clicks).
Evidence (PageSpeed): Mobile LCP **4.07s** (Poor >4s), Mobile FCP (First Contentful Paint) **3.16s** (Poor >3s).
- **Highest-impact quick win: Unify to one primary CTA** per page (and consistent labeling across homepage + pricing) with microcopy like “No credit card required” (if true—otherwise don’t claim). At minimum, add **clarifying decision copy** (“Start with the interactive demo” vs “Create your account”).
Evidence: Homepage shows two hero CTAs (“Get Started” + “Interactive Demo”). Pricing shows “Get Started.”
- **CTA consistency verdict: Inconsistent.** Homepage promotes “Get Started” + “Interactive Demo,” while elsewhere “30 Day Free Trial” appears only via a **mailto** “Contact Us” CTA in text context; pricing is strictly “Get Started.”
Evidence: Homepage CTAs list includes Contact Us -> `mailto:...subject=30 Day Free Trial...`; pricing page CTAs list includes “Get Started” tier links; header includes “Interactive Demo”.

3) Conversion scorecard

Dimension	Score /10	Weight	Weighted
Value prop & differentiation	6	2×	12
Trial / demo CTA clarity	5	2×	10
Pricing plan clarity	6	1.5×	9
Trust & social proof (logos, case studies, reviews)	2	1.5×	3
Signup / onboarding friction	4	1×	4
Feature communication	6	1×	6
Mobile experience	4	1×	4

Overall score = $\text{sum}(\text{weighted}) / 10 = 4.8 / 10$

Rationales (one line each): - **Value prop & differentiation (6/10)**: Clear problem (“calculating your carbon footprint”), but limited above-fold unique proof.

- **Trial/demo CTA clarity (5/10)**: Multiple action paths (“Get Started”, “Interactive Demo”, “Contact Us” trial email) with no routing logic.
- **Pricing clarity (6/10)**: Prices and feature bullets are visible, but plan comparison logic and inclusions (sites, storage) are dense.
- **Trust & social proof (2/10)**: “None detected” social proof; minimal trust evidence beyond an awards image.
- **Signup friction (4/10)**: “Get Started” sends to app signup, but signup steps/requirements are **Not observed in provided content**.
- **Feature communication (6/10)**: Many features listed; needs stronger prioritization and buyer-based outcomes.
- **Mobile experience (4/10)**: Mobile LCP is Poor (4.07s) and FCP is Poor (3.16s), risking drop-offs before CTA view/interaction.

4) Above-the-fold analysis

A) Homepage (desktop-above-fold) — <https://www.greenhalo.nz/>

What's visible above the fold (from screenshot): - Top nav with "About, Contact, FAQs, Resource Hub, Pricing," plus a prominent **"Interactive Demo"** button and "Login". - Hero headline: **"Take the guesswork out of calculating your carbon footprint."** - Two hero CTAs: **"Get Started"** and **"Interactive Demo"** - A hero illustration (trees).

Clarity & gaps: - Value prop is clear at a high level, but **what makes GreenHalo different** is not explicit above fold (beyond "guesswork out").

- Two CTAs are visible but **no guidance** which to choose (trial vs demo vs talk to sales).
- Trust signals above fold: **Not observed in provided content** (logos/reviews/security badges not visible above fold).

B) Pricing page (desktop) — <https://www.greenhalo.nz/pricing>

What's visible above the fold (from screenshot): - Headline: **"Choose Your Plan"** with descriptive paragraph. - Two pricing cards visible:

- "Small Business \$149 + GST / month"
- "Pro \$999 + GST / month" - Each plan has feature bullets and a **"Get Started"** button.

Clarity & gaps: - Pricing is visible immediately (good), but the **comparison is mostly long bullet lists**; key differences aren't visually prioritized.

- No trust reassurance near purchase decision above fold (e.g., onboarding help, support, data security): **Not observed in provided content** above fold.

C) Homepage (mobile viewport 390px) — <https://www.greenhalo.nz/>

What's visible above the fold (from screenshot): - Hamburger menu, logo. - Same hero headline. - The hero CTAs appear lower; above-fold shows a cookie banner overlay ("Accept") and "We're an ESG Award Finalist!" block appears early in the scroll.

Clarity & gaps: - Cookie banner may compete with CTA visibility on small screens.

Evidence: Mobile screenshot shows cookie prompt overlay with "Accept". - Mobile speed risk (LCP 4.07s) may delay hero content/CTAs.

D) Pricing page (mobile) — <https://www.greenhalo.nz/pricing>

What's visible above the fold (from screenshot): - "Choose Your Plan" headline and paragraph. - "Pro \$999 + GST / month" plan begins with bullets; "Small Business" is below.

Clarity & gaps: - On mobile, users see one plan at a time; it's harder to compare quickly.

- Potential risk of "which plan is right?" because "Pro" appears first without a selector or comparison summary above fold (as seen).

5) Top 7 issues

1) Confusing conversion path: demo vs signup vs “30 Day Free Trial” contact email are not unified

- **Impact:** High
 - **Effort:** S
 - **Confidence:** High
 - **Evidence:**
 - Homepage hero shows **two CTAs**: “Get Started” and “Interactive Demo” (hero area).
 - Text context CTAs include Contact Us -> [mailto:info@greenhalo.nz?subject=30 Day Free Trial](mailto:info@greenhalo.nz?subject=30%20Day%20Free%20Trial) with GreenHalo.
 - Pricing page uses **“Get Started”** only (pricing cards).
 - **Recommendation:** Choose a primary path per ICP:
 - For mid-market/enterprise: make **“Book a demo”** (or “Interactive Demo”) primary, with “Start trial” secondary.
 - For self-serve SMB: make **“Start free trial”** primary, with “View interactive demo” secondary. Add one line under CTAs explaining the difference (e.g., “Interactive demo: no setup. Start trial: connect your data.”).
 - **Test idea:** Hypothesis → A clarified primary CTA + decision microcopy increases demo/trial starts.
 - **Primary metric:** Demo starts (clicks to /auth/demo) + signup starts (clicks to /auth/signup)
 - **Guardrail:** Contact form submissions (don’t cannibalize if valuable)
 - **MDE (Minimum Detectable Effect):** +10–15% increase in combined demo+signup starts
-

2) Weak social proof for a high-trust, data-heavy SaaS category

- **Impact:** High
 - **Effort:** M
 - **Confidence:** High
 - **Evidence:** SOCIAL PROOF shows “None detected” on homepage and pricing page; no customer logos/reviews visible in screenshots. One trust image appears: “We’re an ESG Award Finalist!” (homepage section below hero).
 - **Recommendation:** Add a proof block near the hero and again on pricing:
 - Customer logos row (if available), 1–2 quantified outcomes (e.g., time saved, audit readiness), and 1 testimonial with name/company (if permissible).
 - If you can’t use logos, add “Used by sustainability teams at...” with sectors, or anonymized proof.
 - **Test idea:**
 - **Hypothesis:** Adding recognizable proof near CTA increases CTA clicks.
 - **Primary metric:** Hero CTA CTR (Click-Through Rate) to demo/signup
 - **Guardrail:** Bounce rate
 - **MDE:** +8–12% CTR lift
-

3) Mobile Core Web Vital: LCP is “Poor” (4.07s), likely increasing bounce before CTAs engage

- **Impact:** High
 - **Effort:** M/L
 - **Confidence:** High
 - **Evidence (PageSpeed):** Mobile LCP **4.07s** (Poor >4s), FCP **3.16s** (Poor >3s).
 - **Recommendation:** Prioritize largest above-fold assets:
 - Compress/optimize hero imagery (trees illustration), ensure critical CSS, defer non-critical scripts.
 - Confirm the LCP element (likely hero area) and optimize it first.
 - **Test idea:**
 - **Hypothesis:** Improving mobile LCP below 3.0s increases demo/signup starts.
 - **Primary metric:** Mobile CTA CTR + demo/signup starts per session
 - **Guardrail:** Mobile bounce rate
 - **MDE:** +5–10% improvement in mobile conversion rate
-

4) Pricing page lacks “decision support” (who each plan is for) above the fold

- **Impact:** Med/High
 - **Effort:** S/M
 - **Confidence:** High
 - **Evidence:** Pricing shows “Small Business” and “Pro” with long bullet lists; no visible “Best for...” labels or usage-based guidance in the above-fold pricing cards (desktop screenshot).
 - **Recommendation:** Add 1-line qualifiers under plan names:
 - “Small Business — best for 1 site / light automation” (align to actual inclusions shown: “One location/site included”).
 - “Pro — best for multi-site reporting + data insights” (align to bullets).Also add a short “Need more than X sites? Contact us” link near buttons (you already mention more sites in bullets).
 - **Test idea:**
 - **Hypothesis:** Adding plan fit labels increases “Get Started” clicks.
 - **Primary metric:** Pricing → signup CTR
 - **Guardrail:** Pricing page exit rate
 - **MDE:** +10% CTR lift
-

5) Feature differentiation is buried in dense bullet lists

- **Impact:** Med
 - **Effort:** M
 - **Confidence:** High
 - **Evidence:** Pricing plans contain many bullets (e.g., “Automated data feeds...”, “Audit document storage...”, “Live carbon price...”) and mobile view shows a long list before the next plan appears.
 - **Recommendation:** Convert bullets into 5–7 “headline features” with icons + expandable “All features” section. Prioritize differentiators like “Automated Toitū Envirocare export” and “Automated data feeds” into a “Why GreenHalo” comparison row.
 - **Test idea:**
 - **Hypothesis:** Scannable plan cards improve engagement and clicks.
 - **Primary metric:** Scroll depth to CTAs + “Get Started” clicks
 - **Guardrail:** Time on page (don’t inflate without clicks)
 - **MDE:** +8% “Get Started” clicks
-

6) Contact form CTA label “Send” is non-specific and appears as a primary action in multiple pages

- **Impact:** Med
 - **Effort:** S
 - **Confidence:** High
 - **Evidence:** CTAs list includes BUTTON: Send on homepage and pricing; screenshots show a “Get in Touch” form with a **Send** button (footer section).
 - **Recommendation:** Change button to intent-based labels:
 - “Request a demo” / “Ask a question” / “Talk to sales” (choose one consistent with page intent). Add expectation microcopy (e.g., “We’ll reply within 1 business day.”) if true (otherwise don’t claim).
 - **Test idea:**
 - **Hypothesis:** Specific form CTA increases form completion rate.
 - **Primary metric:** Form submissions / form views
 - **Guardrail:** Spam rate / low-quality leads (if tracked)
 - **MDE:** +10% form submissions
-

7) Missing security/privacy reassurance near conversion moments

- **Impact:** Med
 - **Effort:** S/M
 - **Confidence:** Med
 - **Evidence:** Trust signals listed only as phone number and an awards image; no security/compliance statements are shown in provided text/screenshots.
Security badges/claims: Not observed in provided content.
 - **Recommendation:** Add a lightweight trust row near primary CTAs: “Data security”, “Privacy”, “Audit-ready reporting” with links to relevant pages (if they exist). If you have Toitū export prominently, add a short line clarifying what that means for auditors (without overclaiming).
 - **Test idea:**
 - **Hypothesis:** Trust microcopy near CTAs reduces hesitation and increases clicks.
 - **Primary metric:** CTA CTR to demo/signup
 - **Guardrail:** Bounce rate
 - **MDE:** +5–8% CTR lift
-

6) Mobile considerations

1) **Poor mobile LCP (4.07s)** likely delays first meaningful content/CTAs on 4G, increasing bounce.

Evidence: PageSpeed mobile LCP 4.07s; FCP 3.16s.

2) **Plan comparison difficulty on mobile** (one long plan card at a time).

Evidence: Mobile pricing screenshot shows "Pro" plan bullets filling screen; "Small Business" appears later.

3) **Cookie banner competes with hero visibility** on small screens.

Evidence: Mobile homepage screenshot shows cookie prompt overlay with "Accept".

4) **Tap target clarity for primary action:** On mobile homepage above fold, primary CTAs are not clearly visible in the very first view due to content stacking/overlays (based on screenshot).

Evidence: Mobile homepage shows headline + overlay; CTAs appear lower in the page.

5) **Floating chat/help button overlaps content risk** (present on pricing desktop screenshot as a floating icon).

Evidence: Desktop pricing screenshot shows a floating circular icon on the right side; on mobile this can obscure CTAs if not managed. (Mobile overlap **not observed**.)

7) Copy & CTA improvements

3 headline/value prop options

1) **"Automate carbon accounting and sustainability reporting—without the spreadsheet chaos."**

Rationale: Mirrors the "spreadsheets" pain from About page story and positions automation.

2) **"Get audit-ready emissions data fast: measure, track, and report with automated data feeds."**

Rationale: Pulls from homepage/meta ("Automatically draw your emissions data... measure, track, and report").

3) **"Carbon footprint tracking for NZ organisations—built to streamline data collection and reporting."**

Rationale: Matches the NZ focus ("designed for New Zealand organisations") and emphasizes workflow outcome.

3 primary CTA label options

- **"Start your free trial"** (use only if trial is truly self-serve; trial details are not fully confirmed in provided content)
- **"Try the interactive demo"**
- **"Create your account"**

3 trust microcopy examples

- **"See how GreenHalo pulls data automatically (where available)."** (aligns to pricing feature text)
 - **"Includes tailored onboarding options (3 hours free onboarding on Pro)."** (aligns to pricing text: "Three hours free on-boarding")
 - **"Questions before you start? Contact our team."** (aligns to phone number + contact form presence)
-

8) Experiment plan

Week 1 — 2 quick wins

Test 1: CTA routing + labels (Homepage hero) - Hypothesis: If we clarify the primary action (choose one: demo or get started) and add a one-line “which to choose,” more visitors will start a demo/signup.

- **Primary metric:** Combined clicks to /auth/demo + /auth/signup (per session)
- **Guardrail metric:** Bounce rate
- **MDE:** 10%

Test 2: Contact form CTA label + expectation microcopy - Hypothesis: Replacing “Send” with intent-specific copy (e.g., “Request a demo”) increases form submissions.

- **Primary metric:** Form submit rate
- **Guardrail metric:** Form abandonment rate (or time to complete)
- **MDE:** 10–15%

Week 2 — 2 bigger tests

Test 3: Pricing page “Best for” + key differences module - Hypothesis: Adding “Best for” labels + a short comparison (sites included, storage, onboarding, key differentiators) increases “Get Started” CTR.

- **Primary metric:** Pricing → signup click-through rate
- **Guardrail metric:** Pricing page exits
- **MDE:** 10%

Test 4: Add social proof block near hero and on pricing - Hypothesis: Adding credible proof (logos/testimonial/quantified outcome) reduces perceived risk and increases demo/signup starts.

- **Primary metric:** Demo/signup starts
- **Guardrail metric:** Bounce rate
- **MDE:** 8–12%

If you can share screenshots of the **actual app signup flow** (/auth/signup) and demo (/auth/demo), I can audit the highest-leverage point (field friction, step count, SSO options, error handling, and whether pricing promises match the signup experience).
